## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-21, drawn to a transmitter with a puncturing device and interleaver, classified in class 375, subclass 295.
  - II. Claims 31-40, drawn to a receiver with a de-puncturing device and de-interleaver, classified in class 375, subclass 316. The inventions are distinct, each from the other because of the following reasons:
2. Inventions transmitter and receiver are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the details and functionality of the puncturing and interleaving units of the transmitter do not directly apply to the details and functionality of the de-puncturing and de-interleaver in the receiver, wherein said different embodiment of receivers maybe use used to demodulate the same transmitted signal. Further evidence that the subcombination has separate utility can be found Schramm et al (USPN 6,553,540) wherein only an encoding and puncturing method contained within said patent implicitly stating that said

Art Unit: 2611

puncturing and interleaving method does not directly need in order to demodulate the transmitted signal.

3. The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
